#### How to use RBookDown

Firstly, you will have to read the RBookDown Bible by YiHui Xie

In essence, you write in a mixture of markdown (For basics), html (to extend on markdown) and latex language (mostly for equations) to create a simple Note.

You can customise your style and theme through your own CSS.

RMarkdown are mostly used to knit e-books(HTML), use TexStudio if you want a proper PDF, it is easier.

#### Here are some useful tips to get started

- 1: To add a chapter, just open a R file and save as .RMD. Use number 0 to 99 with a hyphen to order the RMD files and maybe add a Chapter name so it is easier to select from Files window at bottom right of the R Studio.
- 2: Code chunks can generate graphical outputs, To insert pictures just use include\_graphics instead of \includegraphics{} or ![](). Width can be customised.

knitr::include\_graphics(rep('images/knit-logo.png', 3))

3: Use 1 grave accent ' to include the in line code, use 3 grave accent to include a chunk of code.
